

"ALEXANDER FLEMING"
Biomedical Sciences Research Center

Call for Expressions of Interest

Postdoctoral fellow, PhD student, Research Assistant M. Tsoumakidou Lab

The laboratory of Dr. Maria Tsoumakidou ([Tsoumakidou Lab](#)) at the Biomedical Sciences Research Center 'Alexander Fleming' (www.fleming.gr) is seeking biomedical scientists at any level in their career (Postdoctoral Fellow, PhD student, Research Assistant/Technician). The interests of the lab focus on oncology research with an emphasis on immunotherapy.

Candidates must hold an MSc or PhD in Biological Sciences or related fields and have excellent command of the English language. Postdoctoral-fellow candidates must have a strong background in advanced microscopy and image analysis, with at least 1 relevant first author publication. Additionally, sound experience in the development and characterization of *in vivo* and *ex vivo* models of disease is highly desirable.

The successful applicants will become members of a highly interactive research group and are expected to interact closely with scientists from different disciplines, including biologists, bioinformaticians, chemists and medical doctors.

Expressions of interest should be sent electronically to tsoumakidou@fleming.gr. Candidates should email a cover letter outlining their interests and areas of expertise (maximum 1 page long), together with detailed curriculum vitae, including contact information of two referees.

Deadline for expression of interest: 30 August, 2021

BSRC Fleming is a top-ranked Greek non-profit research organization focusing on scientific and technological excellence, training and innovation in biomedical sciences. The Center was established in 1998, and operates under the supervision of the General Secretariat for Research and Technology (GSRT) of the Hellenic Ministry of Education. Competitive funding each year amounts to 75-85% of the total budget of the Center, an achievement that underlies Fleming's strategic prioritization of research and innovation. The Center has gained international recognition for its pioneering research towards understanding the molecular and cellular basis of human diseases such as autoimmune diseases, cancer, neurodegenerative disorders, osteoporosis, pulmonary fibrosis and others, and the development of new approaches for their diagnosis and treatment. Fleming's strength and international visibility lies on its focus and success in developing and characterizing animal models that mimic human disease and the Center has consequently invested heavily on related infrastructures.
