

Panagiotis Giannousas is a PhD student in MASSTRUCT Project at BSRC Alexander Fleming. He holds a B.Sc. in Biology and an M.Sc. in Biological Technology from University of Patras. His academic and research background includes neurobiology, mitochondrial function, and oxidative stress through which he has gained experience in advanced molecular and biochemical techniques. He has also worked as a technician in applied biophysics, contributing to experimental workflows involving biophysical characterization and laboratory-based research support.
