

Dr. Aikaterini Tatsaki obtained her BSc in Biological Applications and Technology (2012) and MSc in Biochemistry (2015) from the University of Ioannina. She also holds a PhD (2021) in Biochemistry. During her PhD, she studied the structure-function and evolutionary relationships in bacterial nucleobase transporters. Right after, she moved to Heidelberg University Biochemistry Center and joined the group of Dr. Joachim Moser von Filseck as a Postdoctoral Researcher. There she was trained in cryoEM and worked on projects related to the molecular mechanisms of membrane remodeling.
